SUMMARY

Building towards a career that blends software engineering with data, analytics, and risk. Experience spans data operations, process automation, and AI/agent development, alongside insurance and risk fundamentals.

EDUCATION

Bachelor of Science in Computer Science | Minor in Risk Management and Insurance

St. John's University | Class of 2027 | GPA: 3.7

Dean's List 2023–24, 2024–25, 2025–26 · Peer Mentor, Project A.I.M. · Junior Senator, Student Government · President, Bengali Students Association

Relevant Coursework: Advanced Data Structures, Database Management, Analysis of Algorithms, Software Design Methods, Discrete Mathematics, Programming Fundamentals

CERTIFICATIONS

The Institutes — Insurance Essentials · Underwriting Essentials (2026)

PROFESSIONAL EXPERIENCE

Data Operations Intern | MS Transverse

Jun 2026 – Aug 2026

- Proposed and built an automated Python reconciliation engine for a key monthly premium-balancing control, cutting cycle time by over 70% and per-program processing from tens of minutes to under two.
- Built a rulebook-driven knowledge base encoding reconciliation logic across the program portfolio, validating automated output to the penny against manual totals.
- Deployed the engine as a deterministic, script-backed Claude Skill for repeatable, auditable results; authored adoption documentation used team-wide.
- Designed a second control rating and QC-checking automated data mappings, and built a tool generating interactive Excel PivotTables for audit response.

Artificial Intelligence Intern | SJ Innovation

Jul 2025 – Aug 2025

- Completed 40+ hours of applied AI training on the Collab AI platform and contributed to team-delivered AI solutions using GitHub and collaborative tooling.

Additional Experience | St. John's University

Aug 2024 – Present

- Marketing & Labs Assistant (Jan 2025–Present) · A/V Assistant, Summer Conference Services (May–Aug 2025) · Student Worker, International Admissions (Aug–Dec 2024).
- Maintained AV systems at 95% uptime across 50+ inspected spaces, resolved 10+ technical issues weekly through structured work-ticket systems, and maintained student information databases.

PROJECTS

Digital Marketing Automation Agent | Python

github.com/nafisahmed510/digital-marketing-automation-agent

- Building an agent that sorts incoming social media activity and reports on engagement, so the work does not have to be done by hand.
- Rewrote it from JavaScript into Python so it can plug into the Kortix platform.
- Split it into separate parts for scheduling, connecting to outside services, and analysis, so any one part can be changed without breaking the others.

Multi-Agent Personal Assistant | Python · in progress

github.com/nafisahmed510/agent-system

- Building an assistant where one main agent reads a request, decides which specialist agent should handle it, passes the work along, and puts the answer together.
- Writing the core logic myself, rather than starting from an existing library, so the decision-making stays visible and easy to test.

Personal Portfolio Website | React, TypeScript, Vite

nofishy.space

- Built and deployed a personal site with a custom animated background.
- Reviewed the live site and fixed three problems: a loading script that left the page blank in background tabs, a mobile layout running 40% wider than the screen, and missing search-engine tags. Also cut image sizes by 40% to speed up loading.

SKILLS

Languages & Data: Python, Java, SQL

Data Tooling: pandas, openpyxl, Excel (PivotTables, automation), Power BI, n8n

AI & Agents: Claude Skills development, agentic frameworks, prompt engineering

Platform: AWS, Git, VS Code, React, TypeScript

Domain: Financial reconciliation & controls, insurance premium/bordereau data, data quality & mapping validation
